Effective water-based residual spray

Crackdown offers good residual activity similar to wettable powder formulation.

Crackdown suspension concentrate is a water-based, particulate suspension of deltamethrin. The microscopic particles remain on the treated surface and so are readily available to pick-up by insects. Crackdown has its ability to remain active on a wide variety of surfaces for sustained periods after treatment.

Crackdown will not stain or damage sprayed surfaces due to the suspension in emulsion formulation.

Crackdown is suitable for use in food storage practice and public hygiene for crawling and flying insect control e.g. restaurants, kitchens, hospitals, hotels, food manufacturing premises, homes warehouses, etc.

Crackdown in use

The broad spectrum activity of deltamethrin as Active Ingredient and suspension in emulsion as formulation allow Crackdown to be applied in numerous pest control condition.

American cockroaches, due to their wide searching habits cover large distances in one night. These are readily controlled with band treatments, of Crackdown, concentrating on problem areas such as kitchens, restaurants, food stalls, drains etc., where the cockroaches are known to run or hide.

German cockroaches usually travel only a metre or so from their hiding places to feed. More thorough surface applications are necessary than for the American cockroach. Concentrating on the cracks, crevices and immediate surrounding areas where these insects are known to hide.

Stored products insects may be controlled by means of bag-stack and general surface applications in and around warehouses, silos and handling equipment.

Crackdown can be also used to control fleas and bedbugs with direct application on their harbourage area such as mattress and bedframe. Crackdown do not leave stain or smell on the these surfaces because it formulation is waterbased.

Crackdown is an alternative to wettable powders for the control of flies. As it is not visible after application.

- **Active insecticide**
with broad spectrum control
- **Residual activity**
stays active on a wide variety of surfaces for longer, with low usage rates.

Pack sizes

Crackdown is available, subject to local availability, in one litre container.

Application

To ensure the best results, we recommend you to use quality spray equipment with a fan nozzle and apply diluted Crackdown as a coarse spray to surfaces at 5 litres.

Crackdown effective in control stored product insect that normally infest silo and warehouse. It is recommended to spray Crackdown prior the refilling of commodities in the silo and surrounding the silo.
